

Parts Quick Order

Design 20261005-parts-quick-order-requirements-d7a6 · version 2 · for Demo Garage

Approved	by mhamza on 2026-10-05
Design sha	cc67a06ccf9893626fdd185fb676199de86a97c2fa385fb6252ee4e5214e360b
Screens	3: S-1 , S-2 , S-3
Changes v1	Changed screen S-1: states loading, empty, error, success -> loading: skeleton result rows while first page loads, empty: "No parts match" with Clear search and filters button, error: parts failed to load with Try again, out of stock: row with disabled Add to cart, low stock: "Low stock (3 left)" badge, added: header cart count bumps after Add to cart Changed screen S-2: requirements REQ-1, REQ-9, REQ-11, REQ-12, REQ-13, REQ-14, REQ-15, REQ-16, REQ-17, REQ-18, REQ-19, REQ-20, REQ-22, REQ-23, REQ-24, REQ-36, REQ-37, REQ-39 -> REQ-1, REQ-9, REQ-11, REQ-12, REQ-13, REQ-14, REQ-15, REQ-16, REQ-17, REQ-18, REQ-19, REQ-20, REQ-21, REQ-22, REQ-23, REQ-24, REQ-36, REQ-37, REQ-39, REQ-40, REQ-41, REQ-42, REQ-43; states empty, validation, loading, success, error -> loading: fetching current prices for lines, empty: "Your cart is empty" with link to Find parts, checkout hidden, validation: quantity corrected with "Only n available", validation: Place order disabled until address 5–200 chars and delivery picked, notice: "<part name> is now out of stock" line removed, error: prices failed, lines without prices, Try again, checkout hidden, submitting: Place order disabled while request runs, error: network failure telling buyer to check My orders before retrying, error: server error, cart, address and delivery kept, conflict: 409 lines lowered or removed with messages, success: order ORD-000123 placed, cart emptied Changed screen S-3: states empty, loading, error, success, validation -> loading: skeleton order rows, empty: "No orders yet" with link to Find parts, filtered empty: no orders with the chosen status, detail: order panel open with Placed → Packed → Dispatched → Delivered timeline, confirm: Cancel order confirmation dialog, success: order cancelled, status Cancelled, error: cancel refused because the order has moved past Placed, error: orders failed to load with Try again
Flow	Buyers start on Find parts. They search by name or part number, narrow by category and brand, and press "Add to cart" on parts in stock. The cart count in the header updates each time and links to Cart and checkout. There the cart reloads live prices and stock, the buyer adjusts quantities, enters an address and delivery option, and places the order. Success shows the new order number and a link to My orders, which lists orders newest first with a status filter. Choosing an order opens its detail panel on the

same page, with a timeline and, while the order is still Placed, a "Cancel order" button. The empty cart and empty orders states both link back to Find parts.

The product and its look

Who uses it	Trade and maintenance buyers reordering spare parts for a workshop or site, often searching by part number
Where	Between jobs: at a desk or on a phone in the workshop. Short, repeat sessions to find a part, check stock and order
Device	both
Tone	plain, brisk, trustworthy
What matters most	Finding the right part by its number, seeing its price and stock at a glance, and adding it to the cart in one press
Traits	part-number first, honest stock counts, live prices at cart, keyboard complete

Drawn from

- **Walmart:** Deep trustworthy blue for the bar accent, the primary action and selection; the price is the heaviest text on each row
- **IKEA:** Plain product grid on white, with the article/part number set as a first-class line under the name
- **Amazon:** Dense, filterable results and a cart count that stays in the header

Requirements

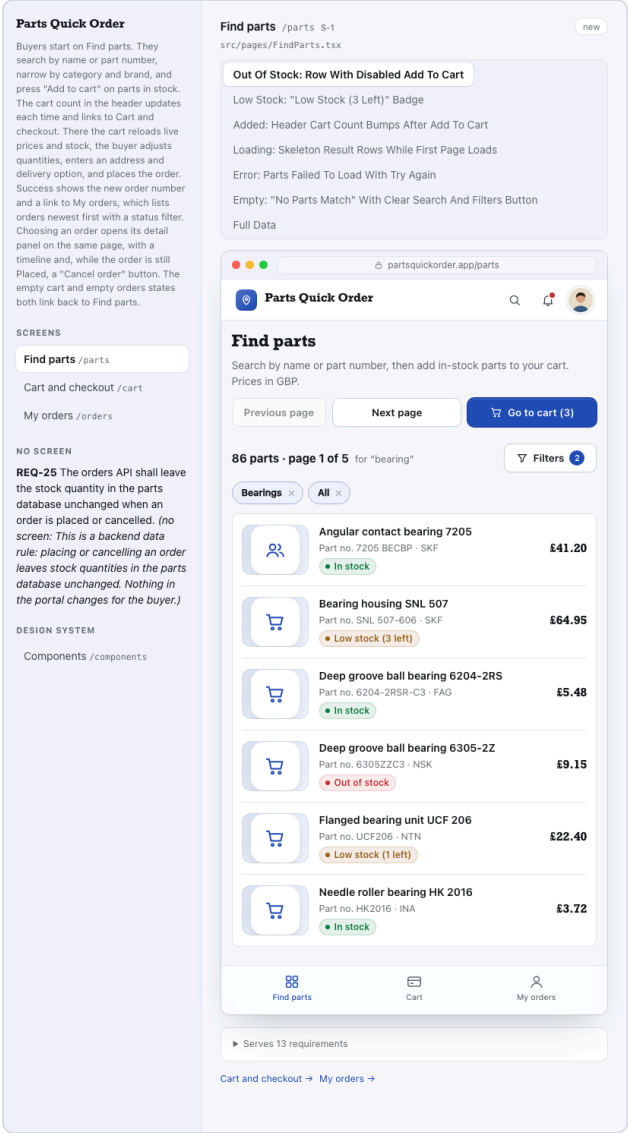

- **REQ-1** The portal shall provide exactly three screens for the signed-in buyer: Find parts at /parts, Cart and checkout at /cart, and My orders at /orders with the order detail panel on the same page.
- **REQ-2** When a buyer requests the parts list, the parts API shall return parts sorted by name A–Z, 20 per page, each with image (or none), name, part number, brand, price in GBP with 2 decimals, stock state and stock quantity as a whole number.
- **REQ-3** The parts API shall set a part's stock state to "In stock" when stock is 5 or more, "Low stock (n left)" when stock is 1 to 4, and "Out of stock" when stock is 0.
- **REQ-4** When the search text has at least 2 characters, the parts API shall return only parts whose name or part number contains that text, ignoring letter case.
- **REQ-5** When the buyer picks a category or brand filter, the parts API shall return only parts matching that one category and that one brand, combined with any search text, where "All" means no filter.
- **REQ-6** When the search text or a filter changes on Find parts, the portal shall show page 1 of the results.
- **REQ-7** When no part matches the search and filters, the portal shall show "No parts match" and a button that clears the search and filters.
- **REQ-8** When the buyer presses "Add to cart" on a part that is in stock, the cart shall add a line with quantity 1, or raise the existing line's quantity by 1.
- **REQ-9** The portal shall show in the header a cart count equal to the total of all quantities in the cart, updated whenever the cart changes.
- **REQ-10** If a part is out of stock, then the portal shall disable its "Add to cart" button.
- **REQ-36** The portal shall show all three screens without horizontal scrolling at viewport widths from 360 px upwards.
- **REQ-37** The portal shall give every form field a visible text label and let the buyer reach and use every control by keyboard alone.
- **REQ-38** While the parts database holds 5,000 parts, the Find parts screen shall load its first page of results in under 2 seconds.

States: out of stock: row with disabled Add to cart, low stock: "Low stock (3 left)" badge, added: header cart count bumps after Add to cart, loading: skeleton result rows while first page loads, error: parts failed to load with Try again, empty: "No parts match" with Clear search and filters button, Full data

ai-factory design 20261005-parts-quick-order-requirements-d7a6 v2 (cc67a06ccf98), approved by mhamza on 2026-10-05

12 / 42

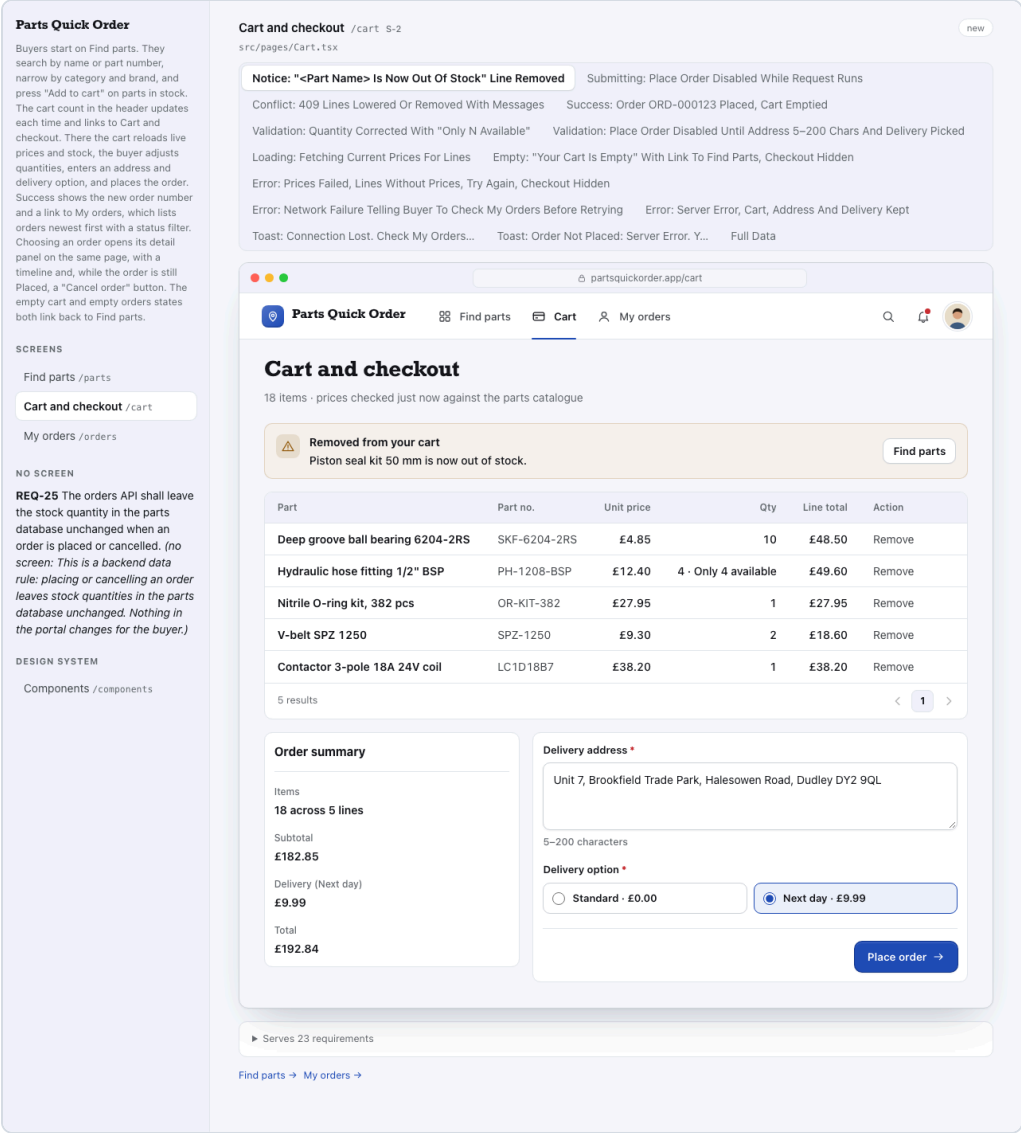

Requirements

- **REQ-1** The portal shall provide exactly three screens for the signed-in buyer: Find parts at /parts, Cart and checkout at /cart, and My orders at /orders with the order detail panel on the same page.
- **REQ-9** The portal shall show in the header a cart count equal to the total of all quantities in the cart, updated whenever the cart changes.
- **REQ-11** The cart shall give each line its name, part number, unit price, quantity and line total, where line total = unit price × quantity.
- **REQ-12** When the buyer changes a line quantity, the cart shall recalculate that line total and the order totals at once.
- **REQ-13** If the buyer enters a quantity that is blank, 0, above 99 or not a whole number, then the cart shall set it to the nearest whole number from 1 to 99.
- **REQ-14** If the buyer enters a quantity above the part's stock, then the cart shall set the quantity to the stock quantity and give the message "Only n available".
- **REQ-15** When the buyer presses "Remove" on a cart line, the cart shall remove that line.
- **REQ-16** The cart shall keep its lines in the browser's local storage under the signed-in buyer's ID, so the cart survives page reloads on the same device.
- **REQ-17** While the cart is empty, the portal shall show "Your cart is empty" with a link to Find parts and hide checkout.
- **REQ-18** The checkout shall enable "Place order" only when the delivery address has 5 to 200 characters and a delivery option (Standard or Next day) is selected.
- **REQ-19** The checkout shall show subtotal, delivery charge (Standard £0.00, Next day £9.99) and total, where total = subtotal + delivery charge.
- **REQ-20** When the buyer places an order with valid lines, address and delivery option, the orders API shall save an order with status Placed, a sequential order number ORD- followed by 6 zero-padded digits, each line's current part price as unit price, and total = subtotal + delivery charge.
- **REQ-21** If a place-order request has no lines, a quantity outside 1–99, an unknown part number, an address outside 5–200 characters, or a missing or unknown delivery option, then the orders API shall reject it with status 400 and save no order.
- **REQ-22** If any line's quantity is above the part's stock when an order is placed, then the orders API shall reject the order with status 409 and return each affected part number with the stock now available, saving no order.
- **REQ-23** When an order is placed successfully, the portal shall empty the cart and show the new order number.
- **REQ-24** If placing an order fails with a network error or a server error, then the portal shall show an error message, which for a network error tells the buyer to check My orders before retrying, and keep the cart lines, address and delivery option so the buyer can try again.
- **REQ-36** The portal shall show all three screens without horizontal scrolling at viewport widths from 360 px upwards.
- **REQ-37** The portal shall give every form field a visible text label and let the buyer reach and use every control by keyboard alone.
- **REQ-39** When the orders API rejects an order with a 409 stock conflict, the cart shall lower each affected line to the stock now available with the message "Only n available", remove each affected line whose available stock is 0 with the message "<part name> is now out of stock", and keep all other lines.
- **REQ-40** While a place-order request is in progress, the checkout shall disable "Place order".

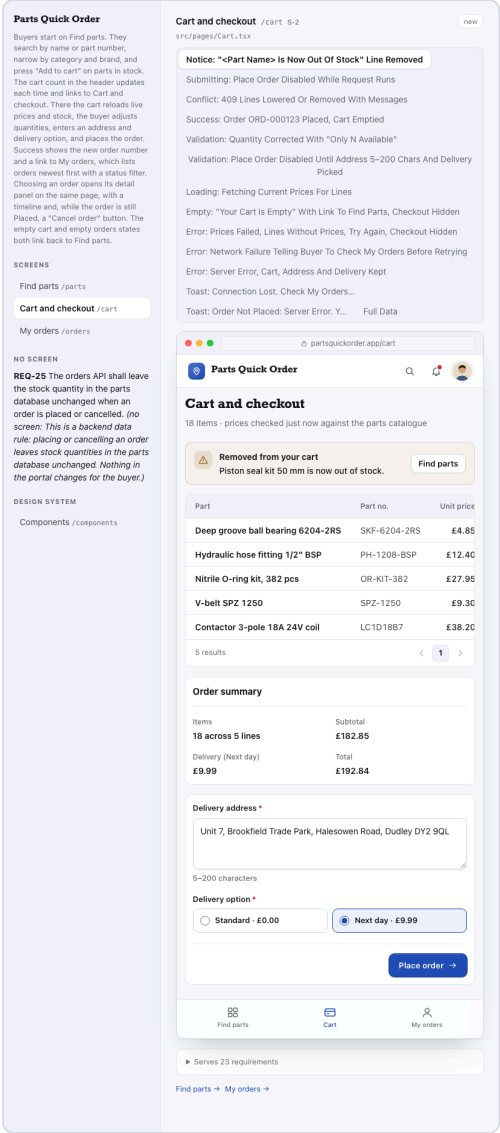

- **REQ-41** When the buyer opens the cart, the cart shall fetch the current price of each line's part from the parts API and use only those current prices for unit prices, line totals and totals.
- **REQ-42** If the current part data fetched when the cart opens shows a cart line's part has 0 stock, then the cart shall remove that line and give the message "<part name> is now out of stock".
- **REQ-43** If the request to the parts API for current prices fails with a network or server error when the cart opens, then the cart shall show the cart lines without unit prices, line totals or totals, show an error message with a "Try again" button, and hide checkout until current prices load.

States: notice: "<part name> is now out of stock" line removed, submitting: Place order disabled while request runs, conflict: 409 lines lowered or removed with messages, success: order ORD-000123 placed, cart emptied, validation: quantity corrected with "Only n available", validation: Place order disabled until address 5–200 chars and delivery picked, loading: fetching current prices for lines, empty: "Your cart is empty" with link to Find parts, checkout hidden, error: prices failed, lines without prices, Try again, checkout hidden, error: network failure telling buyer to check My orders before retrying, error: server error, cart, address and delivery kept, Toast: Connection lost. Parts Quick Order

Buyers start on Find parts. They search by name or part number, narrow by category and brand, and press "Add to cart" on parts in stock. The cart count in the header updates each time and links to Cart and checkout. There the cart reloads live prices and stock, the buyer adjusts quantities, enters an address and delivery option, and places the order. Success shows the new order number and a link to My orders, which lists orders newest first with a status filter. Choosing an order opens its detail panel on the same page, with a timeline and, while the order is still Placed, a "Cancel order" button. The empty cart and empty orders states both link back to Find parts.

error: network failure telling buyer to check My orders before retrying

Parts Quick Order

Buyers start on Find parts. They search by name or part number, narrow by category and brand, and press "Add to cart" on parts in stock. The cart count in the header updates each time and links to Cart and checkout. There the cart reloads live prices and stock, the buyer adjusts quantities, enters an address and delivery option, and places the order. Success shows the new order number and a link to My orders, which lists orders newest first with a status filter. Choosing an order opens its detail panel on the same page, with a timeline and, while the order is still Placed, a "Cancel order" button. The empty cart and empty orders states both link back to Find parts.

Parts Quick Order

Ready start on Find parts. They search by name or part number, narrow by category and brand, and press "Add to cart" on parts in stock. The cart count in the header updates each time and links to Cart and checkout. There the cart reloads live prices and stock, the buyer adjusts quantities, enters an address and delivery option, and places the order. Success shows the new order number and a link to My orders, which lists orders newest first with a status filter. Choosing an order opens its detail panel on the same page, with a timeline and, while the order is still Placed, a "Cancel order" button. The empty cart and empty orders states both link back to Find parts.

ai-factory design 20261005-parts-quick-order-requirements-d7a6 v2 (cc67a06ccf98), approved by mhamza on 2026-10-05

28 / 42

Requirements

- **REQ-1** The portal shall provide exactly three screens for the signed-in buyer: Find parts at /parts, Cart and checkout at /cart, and My orders at /orders with the order detail panel on the same page.
- **REQ-27** The orders API shall return to a buyer only the orders placed by that buyer.
- **REQ-28** When a buyer requests their orders, the orders API shall return them newest first, each with order number, date placed, number of items (total of all quantities), total and status.
- **REQ-29** When the buyer picks a status filter on My orders, the orders API shall return only that buyer's orders with that status.
- **REQ-30** When a buyer opens one of their orders, the orders API shall return its lines (part number, name, quantity, unit price), delivery address, delivery option, total and status.
- **REQ-31** When the buyer opens an order, the portal shall show a status timeline Placed → Packed → Dispatched → Delivered with the current status marked by text as well as colour.
- **REQ-32** While an order's status is Placed, the portal shall show a "Cancel order" button in the order detail that asks for confirmation before calling the cancel API.
- **REQ-33** When a buyer cancels their order whose status is still Placed, the orders API shall set the status to Cancelled.
- **REQ-34** If the order's status is no longer Placed when the buyer confirms cancelling, then the orders API shall refuse with status 409 and leave the status unchanged.
- **REQ-35** While the buyer has no orders, the portal shall show "No orders yet" and a link to Find parts on My orders.
- **REQ-36** The portal shall show all three screens without horizontal scrolling at viewport widths from 360 px upwards.
- **REQ-37** The portal shall give every form field a visible text label and let the buyer reach and use every control by keyboard alone.

Parts Quick Order

Buyers start on Find parts. They search by name or part number, narrow by category and brand, and press "Add to cart" on parts in stock. The cart count in the header updates each time and links to Cart and checkout. There the cart reloads live prices and stock, the buyer adjusts quantities, enters an address and delivery option, and places the order. Success shows the new order number and a link to My orders, which lists orders newest first with a status filter. Choosing an order opens its detail panel on the same page, with a timeline and, while the order is still Placed, a "Cancel order" button. The empty cart and empty orders states both link back to Find parts.

Parts Quick Order

Buyers start on Find parts. They search by name or part number, narrow by category and brand, and press "Add to cart" on parts in stock. The cart count in the header updates each time and links to Cart and checkout. There the cart reloads live prices and stock, the buyer adjusts quantities, enters an address and delivery option, and places the order. Success shows the new order number and a link to My orders, which lists orders newest first with a status filter. Choosing an order opens its detail panel on the same page, with a timeline and, while the order is still Placed, a "Cancel order" button. The empty cart and empty orders states both link back to Find parts.
