| Design sha | 690b3d070482ab2a539d1d601be6b4d39085c8e30af19f641b89a24aaa735275                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Screens    | 3: <a href="#">S-1</a> , <a href="#">S-2</a> , <a href="#">S-3</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Flow       | The buyer lands on Find parts and uses search, category and brand filters to find parts. "Add to cart" updates the cart count in the header, which links to Cart and checkout. There they adjust quantities, enter an address and delivery option, and place the order. After a successful order they see the new order number, with a link to My orders. On My orders they filter by status, open an order in the detail panel on the same page to see its timeline, and can cancel it while it is still Placed. The header links all three screens at every point. |

# The product and its look

|                   |                                                                                                                     |
|-------------------|---------------------------------------------------------------------------------------------------------------------|
| Who uses it       | Company buyers and maintenance staff ordering spare parts for their organisation through the existing company login |
| Where             | At a work desk, sometimes on a phone in the workshop. Short, repeated sessions to find a part number and reorder    |
| Device            | web                                                                                                                 |
| Tone              | efficient, exact, trustworthy                                                                                       |
| What matters most | A part row where price and an honest stock state (In stock / Low stock, n left) sit beside one Add to cart button   |
| Traits            | part-number first, honest stock, three screens only, trade, not shopping                                            |

## Drawn from

- **Amazon:** Dense result rows, near-black text, warm orange used only on the add/buy action
- **IKEA:** Plain product grid on white with tight corners and no decoration
- **Walmart:** Price as the heaviest text on each part
- **Target:** Clean white header that holds a persistent cart count

## Type, corners and spacing

|              |                                                                                                                                    |

## Requirements

- **REQ-1** The portal shall provide exactly three screens for the signed-in buyer: Find parts at /parts, Cart and checkout at /cart, and My orders at /orders with the order detail panel on the same page.
- **REQ-2** When a buyer requests the parts list, the parts API shall return parts sorted by name A–Z, 20 per page, each with image (or none), name, part number, brand, price in GBP with 2 decimals, stock state and stock quantity as a whole number.
- **REQ-3** The parts API shall set a part's stock state to "In stock" when stock is 5 or more, "Low stock (n left)" when stock is 1 to 4, and "Out of stock" when stock is 0.
- **REQ-4** When the search text has at least 2 characters, the parts API shall return only parts whose name or part number contains that text, ignoring letter case.
- **REQ-5** When the buyer picks a category or brand filter, the parts API shall return only parts matching that one category and that one brand, combined with any search text, where "All" means no filter.
- **REQ-6** When the search text or a filter changes on Find parts, the portal shall show page 1 of the results.
- **REQ-7** When no part matches the search and filters, the portal shall show "No parts match" and a button that clears the search and filters.
- **REQ-8** When the buyer presses "Add to cart" on a part that is in stock, the cart shall add a line with quantity 1, or raise the existing line's quantity by 1.
- **REQ-9** The portal shall show in the header a cart count equal to the total of all quantities in the cart, updated whenever the cart changes.
- **REQ-10** If a part is out of stock, then the portal shall disable its "Add to cart" button.
- **REQ-36** The portal shall show all three screens without horizontal scrolling at viewport widths from 360 px upwards.
- **REQ-37** The portal shall give every form field a visible text label and let the buyer reach and use every control by keyboard alone.
- **REQ-38** While the parts database holds 5,000 parts, the Find parts screen shall load its first page of results in under 2 seconds.

Parts Quick Order

The buyer lands on Find parts and uses search, category and brand filters to find parts. "Add to cart" updates the cart count in the header, which links to Cart and checkout. There they adjust quantities, enter an address and delivery option, and place the order. After a successful order they see the new order number, with a link to My orders. On My orders they filter by status, open an order in the detail panel on the same page to see its timeline, and can cancel it while it is still Placed. The header links all three screens at every point.

SCREENS

Find parts /parts

Cart and checkout /cart

My orders /orders

NO SCREEN

REQ-21 If a place-order request has no lines, a quantity outside 1–99, an unknown part number, an address outside 5–200 characters, or a missing or unknown delivery option, then the orders API shall reject it with status 400 and save no order. (no screen: Server-side validation of the place-order request. The checkout already stops invalid input before sending (see REQ-13 and REQ-18), so the buyer never sees this rule. A rejected request falls back to the generic error state on S-2.)

REQ-25 The orders API shall leave the stock quantity in the parts database unchanged when an order is placed or cancelled. (no screen: Data rule: placing or cancelling an order leaves stock quantities in the parts database unchanged. Nothing changes on screen.)

REQ-26 If a request to the API has no valid session token or cookie from the existing company login, then the API shall reject it with status 401. (no screen: API authentication rule. Sign-in is handled by the existing company login, so this portal has no screen for it.)

Parts Quick Order

The buyer lands on Find parts and uses search, category and brand filters to find parts. "Add to cart" updates the cart count in the header, which links to Cart and checkout. There they adjust quantities, enter an address and delivery option, and place the order. After a successful order they see the new order number, with a link to My orders. On My orders they filter by status, open an order in the detail panel on the same page to see its timeline, and can cancel it while it is still Placed. The header links all three screens at every point.

NO SCREEN

REQ-21 If a place-order request has no lines, a quantity outside 1–99, an unknown part number, an address outside 5–200 characters, or a missing or unknown delivery option, then the orders API shall reject it with status 400 and save no order. (no screen: Server-side validation of the place-order request. The checkout already stops invalid input before sending (see REQ-13 and REQ-18), so the buyer never sees this rule. A rejected request falls back to the generic error state on S-2.)

REQ-25 The orders API shall leave the stock quantity in the parts database unchanged when an order is placed or cancelled. (no screen: Data rule: placing or cancelling an order leaves stock quantities in the parts database unchanged. Nothing changes on screen.)

REQ-26 If a request to the API has no valid session token or cookie from the existing company login, then the API shall reject it with status 401. (no screen: API authentication rule. Sign-in is handled by the existing company login, so this portal has no screen for it.)

## Requirements

- **REQ-1** The portal shall provide exactly three screens for the signed-in buyer: Find parts at /parts, Cart and checkout at /cart, and My orders at /orders with the order detail panel on the same page.
- **REQ-9** The portal shall show in the header a cart count equal to the total of all quantities in the cart, updated whenever the cart changes.
- **REQ-11** The cart shall give each line its name, part number, unit price, quantity and line total, where line total = unit price × quantity.
- **REQ-12** When the buyer changes a line quantity, the cart shall recalculate that line total and the order totals at once.
- **REQ-13** If the buyer enters a quantity that is blank, 0, above 99 or not a whole number, then the cart shall set it to the nearest whole number from 1 to 99.
- **REQ-14** If the buyer enters a quantity above the part's stock, then the cart shall set the quantity to the stock quantity and give the message "Only n available".
- **REQ-15** When the buyer presses "Remove" on a cart line, the cart shall remove that line.
- **REQ-16** The cart shall keep its lines in the browser's local storage under the signed-in buyer's ID, so the cart survives page reloads on the same device.
- **REQ-17** While the cart is empty, the portal shall show "Your cart is empty" with a link to Find parts and hide checkout.
- **REQ-18** The checkout shall enable "Place order" only when the delivery address has 5 to 200 characters and a delivery option (Standard or Next day) is selected.
- **REQ-19** The checkout shall show subtotal, delivery charge (Standard £0.00, Next day £9.99) and total, where total = subtotal + delivery charge.
- **REQ-20** When the buyer places an order with valid lines, address and delivery option, the orders API shall save an order with status Placed, a sequential order number ORD- followed by 6 zero-padded digits, each line's current part price as unit price, and total = subtotal + delivery charge.
- **REQ-22** If any line's quantity is above the part's stock when an order is placed, then the orders API shall reject the order with status 409 and return each affected part number with the stock now available, saving no order.
- **REQ-23** When an order is placed successfully, the portal shall empty the cart and show the new order number.
- **REQ-24** If placing an order fails with a network error or a server error, then the portal shall show an error message and keep the cart lines, address and delivery option so the buyer can try again.
- **REQ-36** The portal shall show all three screens without horizontal scrolling at viewport widths from 360 px upwards.
- **REQ-37** The portal shall give every form field a visible text label and let the buyer reach and use every control by keyboard alone.
- **REQ-39** When the orders API rejects an order with a 409 stock conflict, the cart shall lower each affected line to the stock now available with the message "Only n available", remove each affected line whose available stock is 0 with the message "<part name> is now out of stock", and keep all other lines.

States: default, success, validation, loading, empty, error, Toast: Order ORD-004127 placed, Full data

default

Parts Quick Order

The buyer lands on Find parts and uses search, category and brand filters to find parts. "Add to cart" updates the cart count in the header, which links to Cart and checkout. There they adjust quantities, enter an address and delivery option, and place the order. After a successful order they see the new order number, with a link to My orders. On My orders they filter by status, open an order in the detail panel on the same page to see its timeline, and can cancel it while it is still Placed. The header links all three screens at every point.

SCREENS

My orders /orders

NO SCREEN

REQ-21 If a place-order request has no lines, a quantity outside 1-99, an unknown part number, an address outside 5-200 characters, or a missing or unknown delivery option, then the orders API shall reject it with status 400 and save no order. (no screen: Server-side validation of the place-order request. The checkout already stops invalid input before sending (see REQ-13 and REQ-18), so the buyer never sees this rule. A rejected request falls back to the generic error state on S-2.)

REQ-25 The orders API shall leave the stock quantity in the parts database unchanged when an order is placed or cancelled. (no screen: Data rule: placing or cancelling an order leaves stock quantities in the parts database unchanged. Nothing changes on screen.)

REQ-26 If a request to the API has no valid session token or cookie from the existing company login, then the API shall reject it with status 401. (no screen: API authentication rule. Sign-in is handled by the existing company login, so this portal has no screen for it.)

If a place-order request has no lines, a quantity outside 1-99, an unknown part number, an address outside 5-200 characters, or a missing or unknown delivery option, then the orders API shall reject it with status 400 and save no order. (no screen: Server-side validation of the place-order request. The checkout already stops invalid input before sending (see REQ-13 and REQ-18), so the buyer never sees this rule. A rejected request falls back to the generic error state on S-2.)

REQ-25

The orders API shall leave the stock quantity in the parts database unchanged when an order is placed or cancelled. (no screen: Data rule: placing or cancelling an order leaves stock quantities in the parts database unchanged. Nothing changes on screen.)

REQ-26

If a request to the API has no valid session token or cookie from the existing company login, then the API shall reject it with status 401. (no screen: API authentication rule. Sign-in is handled by the existing company login, so this portal has no screen for it.)

Parts Quick Order

The buyer lands on Find parts and uses search, category and brand filters to find parts. "Add to cart" updates the cart count in the header, which links to Cart and checkout. There they adjust quantities, enter an address and delivery option, and place the order. After a successful order they see the new order number, with a link to My orders. On My orders they filter by status, open an order in the detail panel on the same page to see its timeline, and can cancel it while it is still Placed. The header links all three screens at every point.

REQ-21 If a place-order request has no lines, a quantity outside 1–99, an unknown part number, an address outside 5–200 characters, or a missing or unknown delivery option, then the orders API shall reject it with status 400 and save no order. (no screen: Server-side validation of the place-order request. The checkout already stops invalid input before sending (see REQ-13 and REQ-18), so the buyer never sees this rule. A rejected request falls back to the generic error state on S-2.)

REQ-25 The orders API shall leave the stock quantity in the parts database unchanged when an order is placed or cancelled. (no screen: Data rule: placing or cancelling an order leaves stock quantities in the parts database unchanged. Nothing changes on screen.)

REQ-26 If a request to the API has no valid session token or cookie from the existing company login, then the API shall reject it with status 401. (no screen: API authentication rule. Sign-in is handled by the existing company login, so this portal has no screen for it.)

## Requirements

- **REQ-1** The portal shall provide exactly three screens for the signed-in buyer: Find parts at /parts, Cart and checkout at /cart, and My orders at /orders with the order detail panel on the same page.
- **REQ-27** The orders API shall return to a buyer only the orders placed by that buyer.
- **REQ-28** When a buyer requests their orders, the orders API shall return them newest first, each with order number, date placed, number of items (total of all quantities), total and status.
- **REQ-29** When the buyer picks a status filter on My orders, the orders API shall return only that buyer's orders with that status.
- **REQ-30** When a buyer opens one of their orders, the orders API shall return its lines (part number, name, quantity, unit price), delivery address, delivery option, total and status.
- **REQ-31** When the buyer opens an order, the portal shall show a status timeline Placed → Packed → Dispatched → Delivered with the current status marked by text as well as colour.
- **REQ-32** While an order's status is Placed, the portal shall show a "Cancel order" button in the order detail that asks for confirmation before calling the cancel API.
- **REQ-33** When a buyer cancels their order whose status is still Placed, the orders API shall set the status to Cancelled.
- **REQ-34** If the order's status is no longer Placed when the buyer confirms cancelling, then the orders API shall refuse with status 409 and leave the status unchanged.
- **REQ-35** While the buyer has no orders, the portal shall show "No orders yet" and a link to Find parts on My orders.
- **REQ-36** The portal shall show all three screens without horizontal scrolling at viewport widths from 360 px upwards.
- **REQ-37** The portal shall give every form field a visible text label and let the buyer reach and use every control by keyboard alone.

Parts Quick Order

The buyer lands on Find parts and uses search, category and brand filters to find parts. "Add to cart" updates the cart count in the header, which links to Cart and checkout. There they adjust quantities, enter an address and delivery option, and place the order. After a successful order they see the new order number, with a link to My orders. On My orders they filter by status, open an order in the detail panel on the same page to see its timeline, and can cancel it while it is still Placed. The header links all three screens at every point.

Parts Quick Order

The buyer lands on Find parts and uses search, category and brand filters to find parts. "Add to cart" updates the cart count in the header, which links to Cart and checkout. There they adjust quantities, enter an address and delivery option, and place the order. After a successful order they see the new order number, with a link to My orders. On My orders they filter by status, open an order in the detail panel on the same page to see its timeline, and can cancel it while it is still Placed. The header links all three screens at every point.

REQ-21 If a place-order request has no lines, a quantity outside 1–99, an unknown part number, an address outside 5–200 characters, or a missing or unknown delivery option, then the orders API shall reject it with status 400 and save no order. (no screen: Server-side validation of the place-order request. The checkout already stops invalid input before sending (see REQ-13 and REQ-18), so the buyer never sees this rule. A rejected request falls back to the generic error state on S-2.)

REQ-25 The orders API shall leave the stock quantity in the parts database unchanged when an order is placed or cancelled. (no screen: Data rule: placing or cancelling an order leaves stock quantities in the parts database unchanged. Nothing changes on screen.)

REQ-26 If a request to the API has no valid session token or cookie from the existing company login, then the API shall reject it with status 401. (no screen: API authentication rule. Sign-in is handled by the existing company login, so this portal has no screen for it.)

Parts Quick Order

The buyer lands on Find parts and uses search, category and brand filters to find parts. "Add to cart" updates the cart count in the header, which links to Cart and checkout. There they adjust quantities, enter an address and delivery option, and place the order. After a successful order they see the new order number, with a link to My orders. On My orders they filter by status, open an order in the detail panel on the same page to see its timeline, and can cancel it while it is still Placed. The header links all three screens at every point.

NO SCREEN

REQ-21 If a place-order request has no lines, a quantity outside 1–99, an unknown part number, an address outside 5–200 characters, or a missing or unknown delivery option, then the orders API shall reject it with status 400 and save no order. (no screen: Server-side validation of the place-order request. The checkout already stops invalid input before sending (see REQ-13 and REQ-18), so the buyer never sees this rule. A rejected request falls back to the generic error state on S-2.)

REQ-25 The orders API shall leave the stock quantity in the parts database unchanged when an order is placed or cancelled. (no screen: Data rule: placing or cancelling an order leaves stock quantities in the parts database unchanged. Nothing changes on screen.)

REQ-26 If a request to the API has no valid session token or cookie from the existing company login, then the API shall reject it with status 401. (no screen: API authentication rule. Sign-in is handled by the existing company login, so this portal has no screen for it.)
